PEONIES

Peonies are acknowledged to be the finest and most popular, hardy flower grown, that blooms about Decoration Day. I have a large collection of varieties to select from including all types and colors of standard, medium priced peonies.

Plant from September 1 to April 1, the earlier the better. Plant in rich well drained soil, spade 18 inches deep, do not put fertilizer over the plants; plant with eyes 2 to 3 inches below the surface of the ground.

The terms 2-3 eye, 3-7 eye; 7-10 eye divisions or 1 yr.; 2 yr.; and 3 yr. old clumps are as indefinite a description of the size of the plant offered, as a "piece of chalk;" it may be a large or very small one. My prices are for strong 3-7 eye divisions. This is the most popular size to plant. If planted in September, most of them will bloom in May. Larger clumps for sale at prices in proportion to size of plants wanted. Small plants, 5 or more, half price.

Young plants, and most plants, in a dry season, seldom develop normal blooms. The blooms are usually lacking in size, formation and in richness and in delicate colors. Definite conclusions and notes should not be made until after the 3rd to 4th year after planting. A well grown Peony bloom is always pretty. A president of the "American Peony Society" said: There are no really bad peonies." Soil and climatic conditions have a wonderful effect on the general appearance and behavior of the plant and bloom.
